October 29th, 2026

Hello everyone,

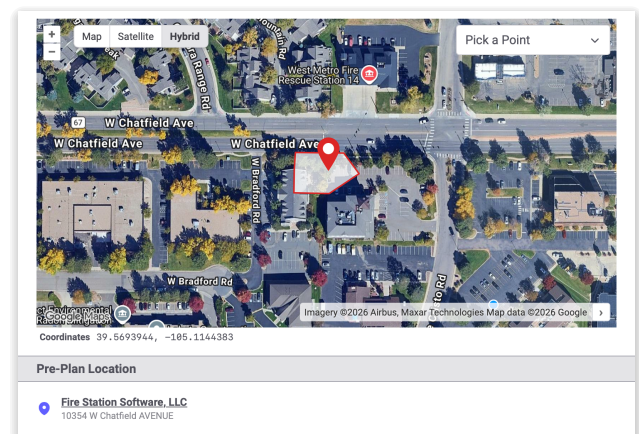

Fall is officially here. Around Fire Station that means cool weather, falling leaves, pumpkin spice (hmm, maybe I'll pass on that one) and, lest we all forget it, daylight savings time ends. But you know what else it means? **A brand new update for Fire Station online!** 🎉

Fire Station now uses Google Maps

When entering the address for a call, Google Maps is now used to provide map data. This includes support for satellite imagery.

A new map type picker has been added to the top-left allowing you to switch between the street map ("Map") or satellite view.

When printing a call that includes maps, the map type selected while editing the call is also used in the PDF printout. What you see online is the same as what you see when printing.

KEEP IN MIND

This only applies when the call is printed with the *Include maps* option enabled. Without this the PDF excludes the map view entirely.

Page 2 of 5 Report generated by Fire Station Software, LLC www.firestationsoftware.com Report Ran 10/29/2026

Across Fire Station, anywhere a map is used the satellite imagery option is available. This includes the hydrant and pre-plan location maps.

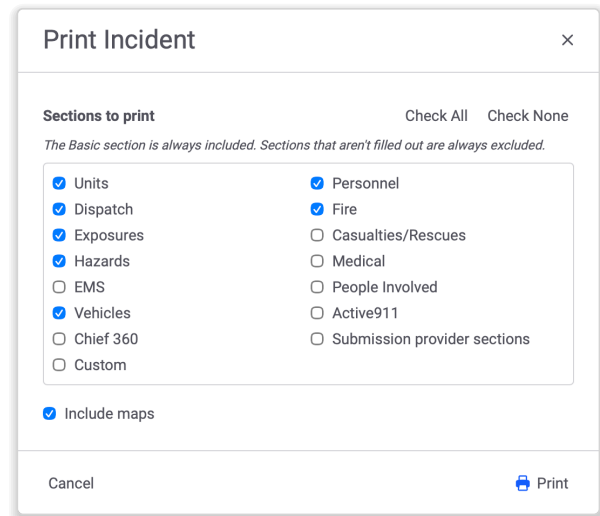

New Options for Printing NERIS Calls

When printing a NERIS call you may now choose to exclude certain sections from the PDF. This can be useful if your department must provide a report but certain information should be excluded.

Use the *Check All* or *Check None* options to quickly include or exclude all available sections in the PDF.

NOTE

The *Basic* section is always included and cannot be removed.

Enhancements for Apparatus Checks

A number of changes have been made to the Apparatus Checks module to smooth out some rough edges.

Read-Only Completed Checks

First, after a check is completed it can no longer be edited. You may still open the check but you will notice that all of the fields are grayed out and disabled.

It is possible to undo submission of the check if you made a mistake and need to edit something. You must have the *Can Delete Completed Checks* permission in order to do this.

...UPDATED

← Previous Next →

Completed check fields cannot be edited (with red arrow pointing to Fuel Level)

Start and Completed Times

The time a check is started and the time it is completed is now tracked. This can be useful for record keeping purposes and to make sure you truck checks are taking the amount of time you'd expect.

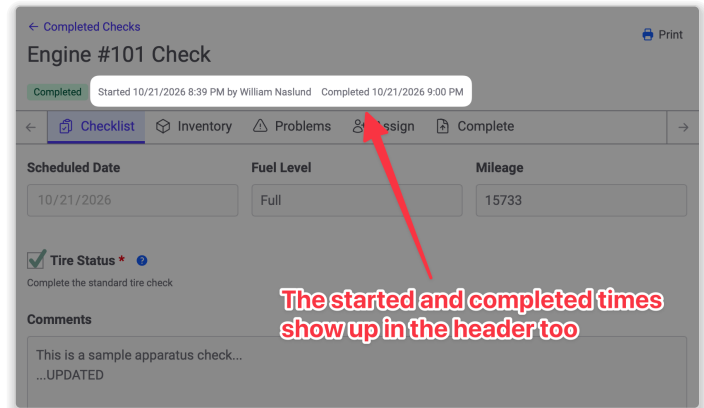

Completed Checks

Apparatus: [Dropdown]

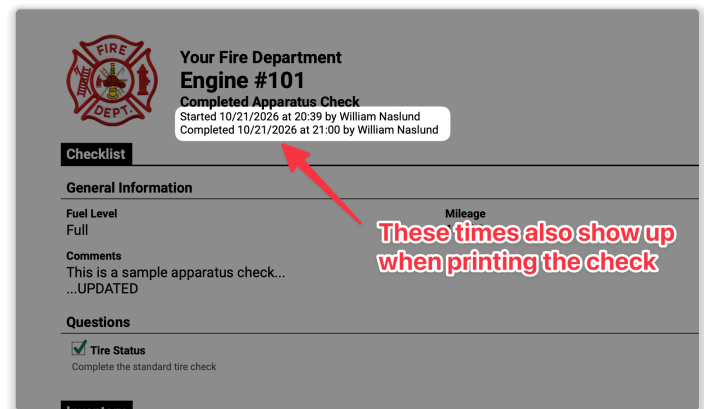

Started	Completed	Apparatus	Completed By
10/21/2026 8:39 PM	10/21/2026 9:00 PM	Engine #101	William Naslund

(Red arrow points to Apparatus column header)

These times show up in the header of the check while viewing it online.

They also show up in the PDF printout.

Description and Comment for Checklist Items

You can now add a description and a comment for your checklist items. These can be used to provide helpful instructions or other context for the folks completing the apparatus check.

The description appears underneath the checklist item.

Clicking the question mark ("?") shows the comment in a modal box.

Description

Complete the standard tire check

Shown under the question during a check to explain what is expected.

Comment

Check pressure in all 4 tires, starting from front driver, and continuing clockwise around truck. Be sure to do this when the temperature is below 90.

Opens from a "?" button next to the question during a check, for the longer explanation.

☐ **Tire Status *** ?

Complete the standard tire check

Tire Status

×

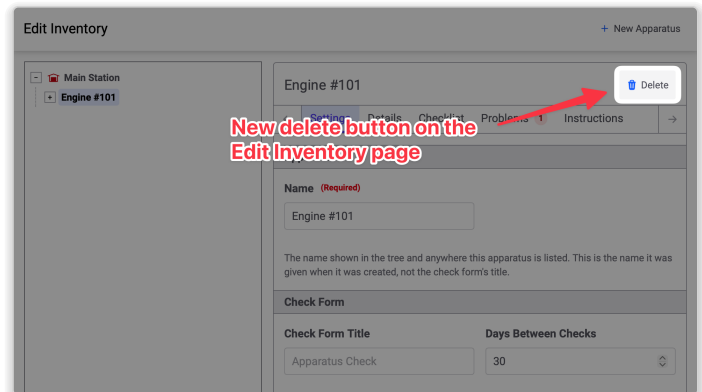

Check pressure in all 4 tires, starting from front driver, and continuing clockwise around truck. Be sure to do this when the temperature is below 90.

Deleting Apparatus

In the *Edit Inventory* page you now have an option to delete an apparatus. This delete hides the apparatus from any future apparatus checks or calls.

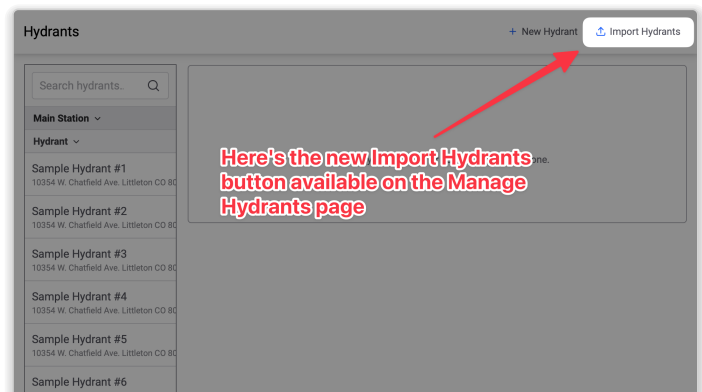

DELETING APPARATUS ON CALLS

If a previous call includes the apparatus, the apparatus will remain on that call and is not automatically removed.

Inventory & Hydrant Imports

We've expanded the import functionality, which was available for importing personnel, to include inventory and hydrants. You will see a new *Import ...* button on any page that supports importing.

Each import provides a template spreadsheet for you to fill out showing you what fields are available. Pay special attention to any column marked as red or blue. These are used to identify records already in Fire Station so that duplicates are not created when you import.

Import support has been added for all inventory types (PPE, SCBAs, Ropes, Ladders, ...etc) and for Hydrants.

Inventory modules available online

All inventory modules are now available in *Fire Station Online*. If your department's license includes them, you should now see *Hoses, Hydrants, Inventory, Ladders, PPE, Ropes, and SCBAs*. These modules are all fully backwards compatible with the *Fire Station Desktop* app and if you previously entered inventory from the desktop app it is also available online.

Changes to the *Inventory* module

The *Inventory* module has been brought online with support for all the functionality available in the *Fire Station Desktop* app but with the following changes. This module is fully backwards compatible but has been re-structured to make it easier to use.

The *Inventory Items* page now shows a consolidated list of all your department's inventory items across all the inventory related modules. This includes personal inventory, hoses, hoses, hydrants, ladders, PPE, ropes, and SCBAs in addition to general inventory items. You can filter the list of inventory items by type as well.

Serial Number	Size	Location	Description	Purchase Date	Cost
		100 Main St	Hydrant Mueller		
		250 Starlight Dr	Hydrant Mueller		
		500 Pine Ave	Hydrant AVK		
		6800 Starlight Dr	Cistern		
Flashlight 601 Danny Cometto	General Inventory	FL-601	SL-SV-601	Assigned	Streamlight Survivor
Flashlight 604 Bob Hendricks	General Inventory	FL-604	SL-SV-604	Assigned	Streamlight Survivor

There is now a distinction between individual inventory "items" and bulk or "stocked" inventory. Any item that is tracked individually, meaning each item is entered as a unique record in Fire Station, appears under the *Inventory Items* page. These are items that have unique identifiers such as serial numbers.

The status of inventory items can also be tracked in Fire Station, giving you a place to record the current state of each item. This can be especially helpful if items get lost, stolen, or broken and you need a way to indicate that the item is unavailable for use while still retaining a record of it in Fire Station.

Date	Status	Changed By	Note
7/17/2026	Broken	William Naslund	Edit Delete

Inventory that is not tracked individually, where a single record has a quantity of items, appears under the *Bulk Inventory* page. These records are called "stock" records since they represent one or more of the same item. You can draw from stock records, creating an inventory item and decreasing the quantity stocked by 1. This takes the place of the "Move to ..." buttons that were previously available in the *Fire Station Desktop* app.
